

## **Personal Benefits on Water Well and Septic System:**

- 1 - Lower the amount of well water used**
- 2 - Lower the amount of electricity used to pump and pressurize your water**
- 3 - Lower wear and tare on you're pumping and pressurizing equipment**
- 4 - Lower septic and leach field load**
- 5 - Lower septic and leach field maintenance**
- 6 - Less chemicals on you (greywater reuse raises your awareness about the chemicals we use on ourselves or our laundry)**
- 7 - Less harsh cleaning chemicals used in your home (greywater reuse raises your awareness about harshness of the cleaning chemicals we use in our home)**
- 8 - Lower temperature by prioritizing trees for watering with greywater**
- 9 - Lower temperatures reduce evaporation letting the landscape absorb and hold more water.**
- 10 - Greywater and Rainwater have more beneficial nutrients than fresh water.**
- 11 - Enjoy planting new plants without the guilt of using more fresh water (get back to gardening)**
- 12 - Lower temperatures mean less energy used to cool your home (lower electric bill)**
- 13 - Keep up your curb appeal and property value with a beautiful yard, and a more sustainable home.**
- 14 - Add value to your investment every year as energy rates rise.**
